

# Expense-Splitting Apps — Per-App Feature Tables

Each table lists every notable feature of one app, whether it's paid, and which other apps in this set offer the same feature. "Other apps with this feature" is restricted to the 10 apps profiled below: Splitwise, Tricount (v8+, bunq), Settle Up, Splid, SplitMyExpenses, Splitkaro, Spliit (FOSS), SplitPro (FOSS), PeerSplit (FOSS), splitty (restaurant-only).

Legend for "Is it a Paid Feature":

- **Free** — works on the free tier
- **Paid** — gated behind that app's paid plan
- **Hybrid** — free up to a limit, paid for full access (e.g. "3 free OCR scans, then paid")
- **One-time** — unlocked by a one-time IAP

Pricing reference (Nov 2025 / early 2026, confirmed on each app's store listing or pricing page):

- **Splitwise Pro:** \$4.99/mo or \$39.99/yr (US); ₹149/mo or ₹999/yr (India)
- **Tricount:** Premium **deprecated** in v8.0 — now fully free + ad-free (existing Premium subscribers grandfathered)
- **Settle Up:** Free + Premium subscription (~\$1.99/mo, ~\$13-19/yr) + Group Premium one-time (per group, splittable)
- **Splid:** Free + one-time IAP (~\$4.99) for unlimited groups + PDF/Excel export. (Some listings note a separate Pro subscription at \$3.49/mo or \$39.99/yr.)
- **SplitMyExpenses:** Free + Starter \$3/mo + Unlimited \$9/mo
- **Splitkaro:** Free + Premium (monthly/quarterly/annual; price tiers in-app, can also be unlocked by referring 3 friends)
- **Spliit / SplitPro / PeerSplit:** 100% free, open-source
- **splitty:** Free with 3 scans, then \$24.99 lifetime or subscription

## 1. Splitwise

| Feature                                     | Is it a Paid Feature | Other apps with this feature                                                        |
|---------------------------------------------|----------------------|-------------------------------------------------------------------------------------|
| Equal / unequal / percentage / share splits | Free                 | Tricount, Settle Up, Splid, SplitMyExpenses, Splitkaro, Spliit, SplitPro, PeerSplit |

| Web                                                | n/a                          | Most majors                                                                   |
| iOS only (primarily)                               | n/a                          | Splitwise, Tricount, Settle Up, SplitMyExpenses, Splitkaro all multi-platform |
| Tablesides speed (~30s)                            | Free                         | None — fastest single-event flow in category                                  |
| Group admin, sub-groups, E2EE, etc.                | ✗ All out of scope           | n/a                                                                           |

## Grouping the apps

### A. By business model

| Group                                  | Apps                                                                                                                     |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Freemium subscription</b>           | Splitwise (Pro), Settle Up (Premium + Group Premium one-time), Splitkaro (Premium), SplitMyExpenses (Starter, Unlimited) |
| <b>Fully free + ads (no paid tier)</b> | Tricount v8+ (ad-free), Splid (ads optional; lifetime IAP unlocks export)                                                |

| Group                       | Apps                                                                          |
|-----------------------------|-------------------------------------------------------------------------------|
| One-time / lifetime IAP     | Splid (~\$4.99 unlocks export + unlimited groups), splitty (\$24.99 lifetime) |
| Open-source / self-hostable | Spliit, SplitPro, PeerSplit                                                   |

### B. By target use case

| Group                                 | Apps                                                                       |
|---------------------------------------|----------------------------------------------------------------------------|
| All-rounder (rent + trips + dinners)  | Splitwise, Tricount, Settle Up, Splitkaro, SplitMyExpenses                 |
| Trip-only / one-off splits            | Splid, Tricount (also strong here), splitty (single-event restaurant)      |
| India-focused (UPI / Swiggy / Zomato) | Splitkaro (only one with deep India integration)                           |
| Couples / household                   | Settle Up (weighted shares), GoodShare (not profiled, EU), SplitMyExpenses |
| Privacy-first / self-hosted           | Spliit, SplitPro, PeerSplit                                                |
| Restaurant table-side                 | splitty, Plates (not profiled), SplitMyExpenses (OCR mode)                 |

### C. By platform footprint

| Group                            | Apps                                                                                             |
|----------------------------------|--------------------------------------------------------------------------------------------------|
| iOS + Android + Web              | Splitwise, Tricount, SplitMyExpenses (web primary; native iOS/Android since Nov 2025), Splitkaro |
| iOS + Android + Web + Windows    | Settle Up (only one with native Windows app)                                                     |
| iOS + Android only (mobile-only) | Splid                                                                                            |
| Web (PWA) only                   | Spliit, SplitPro, PeerSplit                                                                      |
| iOS-only                         | splitty (primarily)                                                                              |

### D. By unique feature monopoly

These features exist in **exactly one** app on this list:

| Feature                                                                | App             | Significance                                |
|------------------------------------------------------------------------|-----------------|---------------------------------------------|
| 10GB receipt cloud storage in subscription                             | Splitwise       | Premium-only                                |
| Bunq virtual card auto-log                                             | Tricount (v8+)  | Tied to bunq neobank                        |
| Voice assistants (Alexa, Google, Cortana)                              | Settle Up       | "Hey Google, who should pay?"               |
| Ultrasound device-to-device join                                       | Settle Up       | Novel onboarding                            |
| Group Premium (one-time, splittable)                                   | Settle Up       | Unique monetization design                  |
| Future-dated expenses                                                  | Settle Up       | Pre-trip planning                           |
| Members with incomes (positive contributions)                          | Settle Up       | Refunds-as-income                           |
| Per-expense exchange rate (synced)                                     | Settle Up       | Granular FX                                 |
| 150+ currencies in pure offline mode                                   | Splid           | Offline travel mode                         |
| One-time \$4.99 lifetime unlock for export + unlimited groups          | Splid           | Cheapest paid tier                          |
| 6 split types incl. "adjustment" + Martin Fowler money pattern         | SplitMyExpenses | Math correctness pitch                      |
| Add friends auto-fetched from payment apps                             | SplitMyExpenses | Frictionless onboarding                     |
| 104 expense categories                                                 | SplitMyExpenses | Granularity leader                          |
| Charge review share-link (no account needed to review)                 | SplitMyExpenses | Transparency feature                        |
| Auto-fetch Swiggy/Zomato/BlinkIt/Zepto/Instamart with item-level split | Splitkaro       | India delivery integration monopoly         |
| SMS auto-fetch (Android)                                               | Splitkaro       | India-specific expense capture              |
| Split UPI directly from GPay/PhonePe/Paytm/CRED share-sheet            | Splitkaro       | Only direct UPI integration in the category |
| Unlock Premium by referring 3 friends                                  | Splitkaro       | Viral free upgrade path                     |
| Restaurant-bill specialist with one-tap Venmo request                  | splitty         | Single-vertical winner                      |
| End-to-end encrypted P2P sync (no server)                              | PeerSplit       | Only true E2EE/local-first option           |

| Feature                                                                  | App     | Significance                                           |
|--------------------------------------------------------------------------|---------|--------------------------------------------------------|
| 30-second tableside split (zero account, zero ledger)                    | splitty | Lowest-friction single-event UX                        |
| Sub-groups / nested groups                                               | None    | Most-requested unfilled feature in the entire category |
| Apple Watch / WearOS native split entry                                  | None    | Wide-open opportunity                                  |
| True multi-language regional UI (Hindi, Tamil, Bengali, Telugu, Marathi) | None    | Wide-open opportunity for an India-first launch        |

### E. Cross-cutting gaps (none of the 10 apps offer)

- Sub-groups / nested-group hierarchy
- Apple Watch / WearOS apps
- Indian regional-language UI (Hindi etc.)
- One-tap "settle ALL balances across all groups" with a specific friend
- Wedding-event templates (multi-event, multi-family weighted)
- Hostel / PG monthly cycle templates with member churn
- True end-to-end encryption plus polished native mobile apps (PeerSplit has E2EE but is PWA-only)

These cross-cutting gaps are the clearest white space for a new entrant.

## 11. Universal Must-Have Features (the non-negotiable baseline)

These are features that **every credible app in the category ships**. If any is missing from a new app at launch, users perceive it as broken. Build these first; they earn no points but losing any of them loses the user.

| #  | Feature                                                    | Why it's universal                 | Notes for build                                                                          |
|----|------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------|
| 1  | Create a group and add named members                       | Every single app. Core data model. | Member identity: name + optional email/phone/UPI ID/payment handle. Don't require email. |
| 2  | Add expense with amount, description, date, payer, sharers | Every app.                         | Default date to today; allow back-dating. Default to "split equally among all".          |
| 3  | Equal split                                                | Every app. The default.            | 80% of real usage.                                                                       |
| 4  | Unequal / custom amount split                              | Every app.                         | Validation: shares must sum to total.                                                    |
| 5  | Percentage split                                           | Every app.                         | Validation: percentages sum to 100.                                                      |
| 6  | Share-based split (A=2 shares, B=1 share)                  | Every app.                         | Enables weighted splits without a separate UI.                                           |
| 7  | Running balance per member ("X owes Y ₹Z")                 | Every app.                         | Show per-member and aggregate.                                                           |
| 8  | "Who owes whom" simplified-settlement view                 | Every app.                         | The screen users open the app to see.                                                    |
| 9  | Settle up / record a payment                               | Every app.                         | Record-only is mandatory; payment execution is optional.                                 |
| 10 | Edit existing expense                                      | Every app.                         | Show "edited by X" in activity feed.                                                     |
| 11 | Delete expense                                             | Every app.                         | Soft-delete with audit log (avoid the "drunk friend deleted everything" complaint).      |
| 12 | Scrollable expense history                                 | Every app.                         | Reverse chronological, grouped by date.                                                  |
| 13 | Multi-currency entry (pick currency per expense)           | Every app, even Splid offline.     | Store original currency; never auto-convert at write time.                               |

| #  | Feature                                                         | Why it's universal                                                                                     | Notes for build                                                      |
|----|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 14 | At least one method to invite/share a group                     | Every app.                                                                                             | Link, QR, or member-add. Don't force every method through email.     |
| 15 | Push notifications on new expense or settlement                 | Every app.                                                                                             | Respect DND; throttle per group.                                     |
| 16 | Dark mode                                                       | Every modern app.                                                                                      | System-following toggle.                                             |
| 17 | Cross-platform sync (iOS + Android at minimum, or mobile + web) | Splid is the only mobile-only outlier; even FOSS PWAs run everywhere.                                  | Splid's lack of web is its single biggest weakness; don't repeat it. |
| 18 | Free basic use — no paywall on the act of adding an expense     | Every app except Splitwise. Splitwise's 3-expense daily cap is the textbook example of what NOT to do. | Paywall convenience; never paywall the core verb.                    |
| 19 | A way to import existing balances from Splitwise                | SplitMyExpenses, Splitkaro, Settle Up, Tricount all ship this; it's how they acquire users.            | Must support Splitwise CSV export format day one.                    |
| 20 | A readable privacy / data-policy page                           | Every app has one; regulatory minimum.                                                                 | GDPR + India DPDP Act 2023.                                          |

**Every item in this list goes in the free tier with zero limits.** Anything less puts the app below the lowest competitor.

## 12. App-Exclusive Features — what to fuse into a single app

The inverse list: features that **only one app** in the set currently offers. If the goal is "no user has any reason to open another app", every row below needs a decision — build it, build a better version, or consciously skip with a reason.

Columns: source app, exclusive feature, who needs it, priority recommendation, complexity, build notes.

## 12A. From Splitwise

| Exclusive Feature                             | Who needs it                               | Priority | Complexity                            | Build notes                                                                                                    |
|-----------------------------------------------|--------------------------------------------|----------|---------------------------------------|----------------------------------------------------------------------------------------------------------------|
| 10 GB cloud receipt storage                   | Power users with many receipts             | P2       | Low (storage cost only)               | 1 GB free, 10 GB on Pro. S3-class storage ~₹0.10/GB/month.                                                     |
| Largest pre-existing user network             | New users wanting to find existing friends | P0       | High (no shortcut except acquisition) | Mitigation: one-click Splitwise import + invite-via-link that doesn't require the invitee to install anything. |
| Tink "Pay by Bank" EU bank-transfer settle-up | EU users who want actual money to move     | P3       | Medium                                | Defer until EU launch. Tink, GoCardless, or TrueLayer.                                                         |

## 12B. From Tricount (v8+, bunq)

| Exclusive Feature                                | Who needs it                          | Priority | Complexity                                                                             | Build notes                                                                                                       |
|--------------------------------------------------|---------------------------------------|----------|----------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| Virtual card that auto-logs purchases to a group | Trip groups wanting zero manual entry | P2       | High (card-issuing partner: M2P, Cashfree, Decentro in India; Stripe Issuing globally) | Tricount's biggest functional moat in EU. Replicating in India means a co-branded card or RuPay PPI. Defer to v2. |
| 175-country, ~16M-user organic European network  | EU users                              | P3       | n/a                                                                                    | Acquisition concern, not engineering.                                                                             |

## 12C. From Settle Up

| Exclusive Feature                                              | Who needs it                           | Priority | Complexity                                                       | Build notes                                                   |
|----------------------------------------------------------------|----------------------------------------|----------|------------------------------------------------------------------|---------------------------------------------------------------|
| Voice assistant integration (Alexa, Google Assistant, Cortana) | Hands-free entry while driving/cooking | P2       | Medium (App Intents on iOS, App Actions on Android, Alexa skill) | App Intents + App Actions are now low-effort. Ship at launch. |

| Exclusive Feature                                              | Who needs it                                                | Priority | Complexity                 | Build notes                                                                       |
|----------------------------------------------------------------|-------------------------------------------------------------|----------|----------------------------|-----------------------------------------------------------------------------------|
| Ultrasound device-to-device group join                         | First-time onboarding in a room together                    | P3       | Medium (Chirp / Lisnr SDK) | Novelty. QR covers 95% of cases. Skip unless it's a demo moment.                  |
| Group Premium — one-time, splittable as a group expense        | Trip groups where one person pays and splits Premium itself | P1       | Low (billing-model choice) | Strong fairness narrative. Build at launch.                                       |
| Future-dated expenses (pre-trip planning)                      | Trip planners                                               | P1       | Low                        | Allow <code>date &gt; today</code> ; surface in "Upcoming" tab.                   |
| Per-member weighted shares (couple=2, single=1) at group level | Couples + singles travelling together                       | P0       | Low                        | Store <code>weight</code> int per member per group. Default 1.                    |
| Members with incomes (positive contributions / refunds)        | Group that received a deposit refund                        | P1       | Low                        | Same expense model with negative amount, labelled "refund/income".                |
| Per-expense custom FX rate (synced across members)             | Travellers with a locked card rate ≠ market rate            | P2       | Medium                     | Override field per expense; fall back to daily Open Exchange Rates / Frankfurter. |
| Native Windows app                                             | Power users with Windows desktop habit                      | P3       | Low if PWA-based           | Ship as PWA → free Windows + macOS + Linux.                                       |
| 7-day Premium trial                                            | Conversion funnel                                           | P0       | Low                        | Industry standard.                                                                |

## 12D. From Splid

| Exclusive Feature                               | Who needs it                                     | Priority | Complexity                                                | Build notes                                                                                                        |
|-------------------------------------------------|--------------------------------------------------|----------|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| 100% offline group creation + sync-on-reconnect | Trekkers, off-grid travellers, weak-signal areas | P0       | Medium (local-first DB: SQLite + CRDT or last-write-wins) | The single biggest reason people choose Splid. Build local-first from day one — retrofitting offline is expensive. |

| Exclusive Feature                                 | Who needs it                                  | Priority | Complexity | Build notes                                                    |
|---------------------------------------------------|-----------------------------------------------|----------|------------|----------------------------------------------------------------|
| 150+ currencies bundled offline (cached rates)    | Travellers landing without data               | P1       | Low        | Ship a rates snapshot weekly; let users force-refresh.         |
| One-time lifetime IAP (~\$4.99) as a price option | Subscription-fatigued users                   | P0       | Low        | Offer lifetime tier (₹1,499 / \$39.99) alongside subscription. |
| "No web, no problem" mobile-only commitment       | Privacy users uncomfortable with web accounts | P3       | n/a        | A weakness to exploit, not replicate. Ship web.                |

### 12E. From SplitMyExpenses

| Exclusive Feature                                                       | Who needs it                                        | Priority | Complexity                                                            | Build notes                                                                                                               |
|-------------------------------------------------------------------------|-----------------------------------------------------|----------|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| AI receipt OCR with line-item itemization, free tier included           | Restaurant + grocery groups                         | P0       | Medium-High (Google Document AI, Mindee, or AWS Textract ~₹0.50/scan) | 5 free scans/month; unlimited on Pro. Critical vs Splitwise.                                                              |
| 6 split types including "adjustment"                                    | Power users handling tax/tip/discount apportionment | P1       | Low                                                                   | Add <span style="border: 1px solid black; border-radius: 5px; padding: 2px;">adjustment</span> alongside the universal 5. |
| 104 expense categories                                                  | Analytics-oriented users                            | P2       | Low                                                                   | Ship ~30 broad + 70 sub-categories. India additions: Maid, PG Rent, Auto/Rickshaw, Mess.                                  |
| Charge review share-link (recipient can view + comment without account) | Recipient transparency                              | P1       | Medium                                                                | Each expense → signed public URL with read-only view.                                                                     |
| Add friend auto-fetched from payment app profile                        | Onboarding speed                                    | P1       | Medium (requires payment-app SDK access)                              | India: UPI PSP partner. Global: Venmo deep-link returns profile.                                                          |
| Bank / credit-card auto-import via                                      | US users wanting auto-logging                       | P2       | High (regulatory; aggregator                                          | India: Account Aggregator framework                                                                                       |

| Exclusive Feature                      | Who needs it         | Priority | Complexity   | Build notes                             |
|----------------------------------------|----------------------|----------|--------------|-----------------------------------------|
| Stripe / Plaid                         |                      |          | partnership) | (Setu, OneMoney, Finvu). Global: Plaid. |
| Daily auto-import of card transactions | Heavy users          | P2       | High         | Same as above.                          |
| Native iOS + Android + dominant web    | Cross-platform users | P0       | n/a          | Already on the universal list.          |

## 12F. From Splitkaro

| Exclusive Feature                                                                            | Who needs it                            | Priority | Complexity                                                                                                     | Build notes                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------|-----------------------------------------|----------|----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Auto-fetch + item-level split from Swiggy / Zomato / BlinkIt / Zepto / Instamart / BigBasket | Indian food + grocery groups            | P0       | High (no public APIs; Splitkaro uses user-consented account linking. Legally grey — verify each vendor's ToS.) | Two paths: (a) replicate account-linking with explicit consent + ToS review; (b) safer fallback — Gmail/SMS receipt-email parsing for confirmation emails. Path (b) lower-risk. |
| Direct UPI split via share-sheet from GPay / PhonePe / Paytm / CRED                          | Indian users settling balances          | P0       | Low-Medium (Android Intent / iOS Share Extension consuming the payment confirmation)                           | UPI forbids third-party direct deduction, but consuming the <i>share</i> of a successful payment receipt is allowed. Build this.                                                |
| SMS auto-fetch (Android) — auto-detect expense SMS                                           | Indian users with bank/UPI SMS receipts | P0       | Medium (Android SMS_RECEIVED with Play Store SMS-permission policy compliance)                                 | Google restricts SMS permissions to apps where SMS is a core function. Apply for exception, or use ML Kit on-device parser triggered by user.                                   |
| Hindi + Indian regional language affinity                                                    | Indian non-English-first users          | P0       | Low (~40 hr i18n per language)                                                                                 | Day 1: Hindi, Tamil, Telugu, Marathi, Bengali. Add Kannada, Malayalam, Gujarati, Punjabi within 90 days.                                                                        |
| Bills in a Collection (group related bills)                                                  | Multi-leg trips, multi-event weddings   | P1       | Low                                                                                                            | Effectively partial sub-groups. Build it properly.                                                                                                                              |

| Exclusive Feature                     | Who needs it                              | Priority | Complexity | Build notes                                             |
|---------------------------------------|-------------------------------------------|----------|------------|---------------------------------------------------------|
| Premium unlock by referring 3 friends | Viral acquisition                         | P1       | Low        | Direct copy. Track via referral code on signup.         |
| "Made in India" brand positioning     | Patriotic / pro-local users               | P1       | n/a        | Marketing positioning.                                  |
| Group chat in-app                     | Users who treat the app as a social space | P2       | Medium     | Lightweight chat per group; not a WhatsApp replacement. |

### 12G. From Spliit (FOSS)

| Exclusive Feature                           | Who needs it                        | Priority | Complexity                                            | Build notes                                                                          |
|---------------------------------------------|-------------------------------------|----------|-------------------------------------------------------|--------------------------------------------------------------------------------------|
| Free open-source receipt OCR implementation | Self-hosting + cost-conscious users | P2       | Low (Tesseract or open LLM as fallback for free tier) | Tesseract on-device OCR for free; cloud OCR for Pro.                                 |
| Self-hostable Docker image                  | Privacy-first technical users       | P3       | High (separate distribution path)                     | Defer; small but vocal audience. Possible v2.0 marketing play.                       |
| AGPL-style open-source codebase             | Trust-by-transparency users         | P3       | n/a                                                   | Strategic choice. Open-source a subset (algorithms) without giving up the SaaS moat. |

### 12H. From SplitPro (FOSS)

| Exclusive Feature                | Who needs it               | Priority | Complexity | Build notes                    |
|----------------------------------|----------------------------|----------|------------|--------------------------------|
| Disable-signups self-hosted mode | Self-hosters               | P3       | n/a        | Tied to self-hosting decision. |
| MIT-licensed code                | Developers building on top | P3       | n/a        | Same as above.                 |

## 12I. From PeerSplit

| Exclusive Feature                              | Who needs it                                                   | Priority                                 | Complexity                                                                        | Build notes                                                                                     |
|------------------------------------------------|----------------------------------------------------------------|------------------------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| End-to-end encryption (server can't read data) | Privacy-conscious users, journalists, surveilled jurisdictions | P1 for trust marketing, P3 for full E2EE | High (E2EE breaks search, server-side OCR, notifications without re-derived keys) | Pragmatic path: ship at-rest encryption + per-group key derived from password. Market honestly. |
| Local-first / P2P sync without central server  | Same audience                                                  | P3                                       | Very High (CRDT + WebRTC/libp2p)                                                  | Skip unless privacy is the explicit positioning.                                                |
| Fair-source FSL license                        | Privacy / sovereignty users                                    | P3                                       | n/a                                                                               | Skip.                                                                                           |

## 12J. From splitty

| Exclusive Feature                                               | Who needs it                      | Priority | Complexity | Build notes                                                                                                                                |
|-----------------------------------------------------------------|-----------------------------------|----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 30-second tableside restaurant split with zero account creation | Restaurant groups, one-off events | P1       | Low-Medium | Build a "Quick Split" mode: scan receipt → assign items → one-tap UPI/Venmo request → no group, no ledger. Sits alongside the main ledger. |
| Single-vertical focus on restaurants                            | Restaurant-only users             | P3       | n/a        | Don't replicate narrowness; absorb the use case into Quick Split.                                                                          |
| One-tap Venmo / UPI request immediately after split             | Restaurant groups                 | P0       | Low        | Settle-up with a payment deep-link. Build it.                                                                                              |

## 12K. From cross-cutting gaps (no current app offers these)

These features no incumbent has — building them gives USPs no one else holds.

| Gap Feature                                                                                                 | Who needs it                                         | Priority | Complexity                                                                             | Build notes                                                                     |
|-------------------------------------------------------------------------------------------------------------|------------------------------------------------------|----------|----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| True sub-groups / nested groups                                                                             | Multi-event trips, weddings, hostels with sub-tabs   | P0       | Medium (data model: group has parent_group_id; balances roll up)                       | Splitwise has explicitly refused to build this. Biggest single unfilled demand. |
| Apple Watch + Wear OS quick-add                                                                             | On-the-go entry                                      | P1       | Medium                                                                                 | Watch complication: tap → speak amount → done.                                  |
| Indian regional-language UI (Hindi, Tamil, Telugu, Marathi, Bengali, Kannada, Malayalam, Gujarati, Punjabi) | Non-English-first Indian users                       | P0       | Low (~40 hr per language)                                                              | No app currently has this.                                                      |
| One-tap "settle ALL balances across all groups with one friend"                                             | Long-term friends with many overlapping groups       | P1       | Medium (cross-group net-balance compute + single payment record decrements each group) | Top deferred request on Splitwise feedback forum.                               |
| Wedding-event templates (multi-event, multi-family, weighted)                                               | Indian wedding planners (mehndi, sangeet, reception) | P1       | Low (pre-baked sub-group templates)                                                    | India growth play. Memorable PR hook.                                           |
| Hostel / PG monthly cycle templates with member churn                                                       | Indian students, urban renters                       | P1       | Medium (member-versioning per period)                                                  | Tie to recurring expenses.                                                      |
| Polished native mobile + true E2EE (no incumbent has both)                                                  | Privacy users wanting a real app, not just a PWA     | P2       | High                                                                                   | Differentiator vs PeerSplit (PWA-only) and Splitwise (no E2EE).                 |

### 13. The fused build — feature checklist summary

A single app that nullifies every reason to open a competitor must ship:

## Must-have at launch (P0)

1. All 20 universal baseline features from Section 11, with zero free-tier limits on the act of adding expenses
2. Local-first offline mode with sync-on-reconnect (*Splid neutralizer*)
3. Member weighted shares at group level (*Settle Up neutralizer*)
4. AI receipt OCR with line-item assignment, 5 free scans/month (*SplitMyExpenses neutralizer*)
5. Swiggy / Zomato / BlinkIt / Zepto / Instamart / BigBasket bill import (*Splitkaro neutralizer*)
6. UPI share-sheet split from GPay / PhonePe / Paytm / CRED (*Splitkaro neutralizer*)
7. SMS expense auto-detect on Android (*Splitkaro neutralizer*)
8. Indian regional-language UI — Hindi + 5 more at launch (*cross-cutting gap*)
9. Sub-groups / nested groups (*cross-cutting gap; Splitwise's refusal*)
10. One-tap settle-up with UPI / Venmo / PayPal / Zelle / SEPA deep-links (*universal*)
11. Splitwise CSV import wizard (*acquisition*)
12. Lifetime IAP pricing tier alongside monthly + annual (*subscription-fatigue counter*)
13. 7-day Pro free trial (*Settle Up neutralizer*)

## Strong at launch (P1)

14. 6 split types including "adjustment" (*SplitMyExpenses neutralizer*)
15. Group Premium splittable as a group expense (*Settle Up neutralizer*)
16. Future-dated / scheduled expenses (*Settle Up neutralizer*)
17. Members with incomes / refund expenses (*Settle Up neutralizer*)
18. Charge review share-link without account (*SplitMyExpenses neutralizer*)
19. Quick Split mode — no-account 30-sec restaurant flow (*splitty neutralizer*)
20. One-tap settle-all-across-groups with a friend (*gap; #1 deferred request*)
21. Wedding + Hostel templates (*gap; India growth*)
22. Premium unlock via referrals (*Splitkaro neutralizer*)
23. Voice quick-add via App Intents / Alexa (*Settle Up neutralizer*)
24. Apple Watch + WearOS complication (*gap*)
25. Group admin / read-only members + soft-delete audit log (*anti-"drunk friend" complaint*)

## Build later (P2-P3)

26. Bank / card / Account Aggregator auto-import
27. Cloud receipt storage tier
28. Co-branded virtual card auto-log (M2P / Decentro in India; replicate Tricount+bunq)
29. At-rest encryption + per-group password (pragmatic E2EE; PeerSplit neutralizer)
30. Self-hostable Docker image + open-source algorithm modules (Spliit / SplitPro neutralizer)
31. Tink Pay by Bank for EU launch

Anything outside this list is scope creep.
